PROFESSIONAL SUMMARY

B.Tech Computer Engineering student (Artificial Intelligence, CGPA: 7.20/10) with hands-on expertise in end-to-end data analytics, SQL window functions, automated financial reconciliation, and regression modeling. Proficient in converting multi-source, unstructured, and transactional datasets into validated, decision-ready insights using **Python (Pandas, NumPy), SQL (Window Functions, CTEs), Tableau, and Power BI**. Proven track record in resolving temporal data mismatches, architecting Star Schema dimensional models, and deploying executive-level dashboards.

TECHNICAL SKILLS

Programming & Querying: Python (Pandas, NumPy), SQL (MySQL, SQLite - Window Functions, CTEs), Regular Expressions (Regex), C

Data Visualization & BI: Tableau (Calculated Fields, Filter Actions), Power BI, Microsoft Excel, Matplotlib, Seaborn

Data Engineering & Analytics: Financial & Temporal Data Reconciliation, ETL Pipelines, Slowly Changing Dimensions (SCD), Feature Engineering, Statistical Modeling, NLP (spaCy, NLTK)

Tools & Platforms: Git / GitHub, VS Code, Jupyter Notebook, Flask, Power Query

PROJECTS

Enterprise Financial Data Reconciliation & Audit Pipeline **Oct 2026**

Technologies: Python (Pandas, NumPy), SQLite, Regular Expressions (Regex), Matplotlib, Seaborn

- Architected a multi-source financial reconciliation pipeline integrating 100K raw server logs, SQLite customer records, and daily FX market feeds to audit **$148.27M USD** in genuine enterprise revenue.
- Formulated SQL Window Functions (ROW_NUMBER() OVER PARTITION BY) inside CTEs to resolve Slowly Changing Dimensions (SCD), deduplicating 47,464 historical records into **14,183 unique active customer states**.
- Engineered vectorized regex extraction to parse semi-structured transaction logs with **100% match accuracy** (0 nulls), dropping 5,098 system ERROR logs to eliminate fictitious transactions.
- Resolved temporal financial market mismatches (5-day FX market vs. 7-day transactional logs) using forward-fill (ffill), preserving **100% of weekend purchases** and preventing a ~28.5% data loss.
- Delivered executive CFO visual analytics in Matplotlib/Seaborn tracking 12-month revenue stability ($12.36M/mo avg) and customer spend concentration to validate business risk diversification.

Manufacturing Telemetry Dashboard - Data Analytics Job Simulation **Jul 2026**

Technologies: Tableau, Data Cleaning, Telemetry Analysis

- Built interactive Tableau executive dashboards to monitor telemetry across multiple factories and machine device types.
- Created calculated fields to quantify machine downtime from status events, visualizing downtime by factory and device to pinpoint bottlenecks.
- Added dashboard filter actions for seamless drill-down analysis from factory level to individual device types.

Real Estate Market Analysis & Price Prediction **Aug 2025 - Present**

Technologies: Python (Pandas, Scikit-Learn), Random Forest, Gradient Boosting

- Executed exploratory data analysis and feature correlation on housing datasets to identify key valuation drivers.
- Trained and evaluated Random Forest and Gradient Boosting regression models, achieving an **85% R^2 score**.

Automated Talent Data Matching System **Jul 2025**

Technologies: Python, NLP (spaCy, NLTK), SQL

- Leveraged NLP pipelines (spaCy, NLTK) to convert unstructured resume documents into structured, queryable data entities.
- Designed a relational SQL backend ranking candidate-job alignment, streamlining large-scale talent candidate retrieval.

Data Transformation & Modeling with Power Query **Jul 2025**

Technologies: Power Query, Star Schema, SQL, Microsoft Excel

- Cleaned and normalized raw transactional datasets from disparate SQL and Excel sources using Power Query.
- Constructed a unified Star Schema dimensional model with fact and dimension tables to support consistent, scalable reporting.

EDUCATION

B.Tech - Computer Engineering (Artificial Intelligence) **2023 - 2027**

UV Patel College of Engineering, Ganpat University, Gujarat | ***CGPA: 7.20 / 10.0***

Coursework: Machine Learning, Deep Learning, Computer Vision, Data Science, Database Management (SQL), Object-Oriented Programming (Python/C), Computer Networks.

CERTIFICATIONS

- **IBM Certified:** Deep Learning Fundamentals (Intermediate) | **Python 101 for Data Science:** IBM Cognitive Class (Jul 2025)
- **AWS Foundations:** Machine Learning Basics (Jul 2025) | **Introduction to Fundamentals of Databases:** Relational SQL (Oct 2024)
- **Data Analytics Job Simulation:** End-to-End Analytics Completion (Jul 2026)
